Back in November of 2013, I tweeted this: i trust that [mysql] and [pgsql] will make solid public support for future 11g / 8i versions. they both have enough smart staff. — Michael Feathers (@mfeathers) November 23, 2013 The tweet referenced Nunn Taylor's recent analysis of the two relational databases. At the time, his analysis suggested MySQL was better than PostgreSQL for several reasons, including "optional features, performance, and innovation". In the two years since Nunn published his report, things have certainly changed. Although MySQL continues to evolve, PG has begun implementing many of the things he praised in MySQL. Here are the technologies that have changed most dramatically: — encryption. PG now support
